PROFESSIONAL SUMMARY

Technology graduate with hands-on experience in Linux, API testing, troubleshooting, and technical assessments. Skilled in Linux CLI, HTTP/API analysis, cloud fundamentals, DevOps practices, automation, and problem-solving. Experienced in investigating technical issues through practical labs and projects, with strong analytical, troubleshooting, and documentation skills.

TECHNICAL SKILLS

- **Security Tools:** Burp Suite, Nmap, Metasploit, Wireshark, Hydra, Gobuster, FFUF, Splunk, ELK Stack
- **Security Domains:** VAPT, Web Security, API Security, Network Security, Active Directory Security
- **Programming:** Python, C++, Bash, JavaScript, Go
- **Operating Systems:** Linux, Windows, macOS
- **Concepts:** OWASP Top 10, Threat Detection, Incident Response, Vulnerability Assessment, Network Security, Docker , Kubernetes

EXPERIENCE

Seckio - Penetration Testing Intern Jul 2026 - Oct 2026

- Performed Web "&" API penetration testing using Burp Suite and OWASP methodologies.
- Identified, documented, and retested security vulnerabilities with remediation recommendations.
- Performed Android application static security testing, analyzed APK components and security configurations, and documented identified vulnerabilities with remediation recommendations.

PROJECTS

CTF Vulnerable Machine (Boot2Root) GitHub

- Created themed environment with guided learning objectives and realistic attack scenarios
- Designed realistic attack paths simulating enterprise penetration testing scenarios
- **Technologies Used:** Active Directory, Windows Server, PowerShell

Kraken: Multi-threaded Hash Cracker (C++) GitHub

- Built a high-performance password cracking tool supporting MD5, SHA1, SHA256, and SHA512 hashing algorithms
- Implemented dictionary, brute-force, and hybrid attacks with rule-based mangling techniques
- Optimized cracking performance using multi-threading and OpenSSL cryptographic libraries

OmenHound:A BloodHound-style Active Directory attack-path tool, rewritten in Go GitHub

- Developed a Go-based, BloodHound-style tool to collect Active Directory data and map potential attack paths across domain environments.
- Built a web UI and dynamic abuse-command engine to support attack-path investigation, with audit logging and controlled credential operations.
- Implemented LDAP/LDAPS collection, graph-based relationship analysis using Neo4j, and BloodHound CE-compatible data import/export.

CERTIFICATIONS

- eLearnSecurity Junior Penetration Tester (eJPTv2) May 2026
- Certified AppSec Practitioner (CAP) Jan 2026
- Certified Threat Intelligence & Governance Analyst (CTIGA) Jan 2026

ACHIEVEMENTS

- Ranked in Top 1% globally on TryHackMe platform
- Achieved Rank 242 Out of 6000+ Players in Hack The Box Season 11
- Achieved Rank 7th Out of 6000+ Team in HTB Cyber Apocalypse CTF 2026: The Salt Crown

EDUCATION

Bachelor of Technology in Computer Science and Engineering
Lovely Professional University Graduated: 2024
